

The Envision window series by AROW Global is ideal for operators looking for a window that is easy to operate, easy to clean and won't get in the way of their work.

This new window series utilizes the same superior water management system that is typical for AROW Global products and combines a simple, high performance design with attractive interior and exterior aesthetics.

Product Features

- Class 1 anodized frame finishes are standard with no exposed surfaces.
- All sealant materials are UV stable.
- Superior weather tight design - windows are water tested to a minimum pressure of 40 psi.
- Built with materials that conform to the applicable requirements of ANSI Z26.1 safety glass.
- Windows are cycle tested to ensure durability.
- A custom designed handle and latch make operating the slider effortless for the operator, even with the use of gloves.

Removable Sash Slider

Bonded Sash Slider

Framed Slider

Removable Sash Slider

This patent pending window design has a removable sash making window maintenance and cleaning a simple task. With the retention bar pulled outward (disengaged), the sash can be lifted up and removed without the use of tools.

- By rotating the cam latch lever into an upward position, the sash is allowed to effortlessly slide open and closed. Pushing the cam latch lever down locks the sash in place.
- With the cam latch lever in up (open) or down (closed) position, the projection of the latch lever into the vehicle interior is minimal.
- The spring loaded latch retention bar prevents the slider sash from jumping out of the PVC track during vehicle operation.

Bonded Sash Slider

The bonded sash slider is a modern looking all glass window with a sliding sash mounted into a glass cut-out. The shape of the glass can be tailored to meet any size of opening and was designed to be bonded directly to the vehicle structure. Other mounting options are available.

- Available in 6mm polycarbonate and 5mm glass. The 5mm glass option can be easily replaced without removing the frame.
- Optional aluminum guard is available to prevent an operator from extending their arm through the sliding window opening.
- Window can operate in temperatures ranging from -22°F (-30°C) to 176°F (80°C).

Window exterior view

Framed Slider

The Framed Slider is a configurable window that can be be mounted using several different methods.

- Locking gasket
- Clampring
